Heart of the Continent

Voyageurs' landscape of abundant rock and dense woods hugs the outer edges of the Canadian Shield and the northern boreal forest. Interconnected lakes—Rainy, Kabetogama, Namakan, Sand Point, and dozens of smaller ones—were once routes for travel and trade.

This land of spectacular beauty and rich history was first proposed as a national park in 1891 by people concerned about encroaching industry. It would be another 80 years before Congress authorized the park. In 1975 Voyageurs became the nation's 36th national park.

Leave your car behind and set out on a water highway through the heart of the continent—in the wake of the Ojibwe and French-Canadian canoeemen of long ago.

Stories in the Rocks

Voyageurs National Park is one of the few places in North America where you can see and touch rocks half the age of the Earth. The exposed rock you see all around you is the southern edge of the Canadian Shield, a gigantic dome of volcanic bedrock that forms the core of the continent.

This bedrock is from the birth of North America. Massive, explosive volcanoes deposited layer after layer of ash and lava, building up the landmass. Subsequent uplifting, folding, tremendous pressure, and superheating created igneous and metamorphic rock.

Eons of erosion wore down the volcanic mountain ranges. The ice ages brought glaciers, moving rivers of ice that scoured away the younger rock layers. This action

exposed the deep roots of the ancient mountains—granite, migmatite, and biotite schist you see today. As the glaciers receded, torrents of meltwater filled low-lying areas, creating lakes. The geologic forces of uplift and erosion continue to shape the landscape.

The oldest rock in the park tells a recent human story. Fault zones in exposed 2.8-billion-year-old greenstone revealed gold embedded in quartz veins. The discovery sparked a short-lived mining rush in the 1890s. To accommodate the gold miners on Little American Island, Rainy Lake City sprang up on the shores of Black Bay and grew to a population of over 200. No one got rich, and the boomtown was abandoned by 1901. Many of the newcomers stayed for good, and their descendants still live in the region.

Ecosystem on the Edge

The beautiful scenery that surrounds you is in fact a complex ecosystem. Since the retreat of the glaciers some 10,000 years ago, decomposed vegetation has covered the bedrock with less than a foot of topsoil, enough for the southern reaches of the boreal forest to take hold. Hardwoods like birch and aspen, and conifers like spruce and pine merge in a wondrous diversity of plant and animal life. This is a fragile, ever-changing world, affected by various human and natural forces.

One influence is modern industry—logging, mining, and commercial fishing. Fire suppression and timber harvesting have shaped the process of forest succession. The dense forests that blanket the land are a patchwork quilt of second-growth boreal species. Industry has also affected water levels, and management efforts improve habitat for fish, birds, and other aquatic life.

Climate change provides opportunity for new species to take hold. The same environment that welcomes new species

Fortunes from Fur

For several generations the fur trade was one of North America's biggest industries. Trapping, trading, and travel routes were well established by the time Europeans came to North America in search of wealth. By the early 1700s, the heart of the fur trade had moved inland. The Ojibwe Indians were the gatekeepers of the rich fur lands north and west of the Great Lakes. Not only were they skilled traders, guides, interpreters, hunters, and trappers, but they supplied fur posts and canoe brigades with food, birchbark canoes, and other essentials.

The fur trade was a highly competitive commercial enterprise with a complex network of Indian alliances and specialized occupations: trappers, traders, clerks, and canoeemen known as voyageurs. Expertly maneuvering the lightweight birchbark canoes through the North

Getting to Voyageurs
Voyageurs National Park is in northern Minnesota on the Canadian border. The nearest airport is at International Falls. The park is about a five-hour drive from Minneapolis/St. Paul. Take I-35 to Duluth, then US 53 north. See park map (below) for detailed routes.

Exploring Voyageurs National Park

Kettle Falls Hotel

North Canoe paddlers

Oberholzer Trail

Aurora borealis

Canoe campsite, Sand Point Lake

Stop first at one of the visitor centers: Rainy Lake, Kabetogama, and Ash River. Each has information, exhibits, park movie, bookstore, Junior Ranger programs, boat ramps, hiking trails, and more. Visitor centers are open daily in summer; Rainy Lake operates year-round.

Voyageurs is a water-based park. Travel to the 500-plus islands and 655 miles of shoreline is by watercraft. "Don't Miss" destinations include Anderson Bay, Ellsworth Rock Gardens, Hoist Bay, Kettle Falls, and Little American Island. But with 218,054 acres of land and water, there are countless out-of-the-way places to find your own adventure.

For detailed information, get a copy of the park newspaper *Rendezvous* or visit www.nps.gov/voya.

THINGS TO SEE AND DO

Scheduled Programs and Boat Tours

Paddle a canoe on the Voyageurs Highway. Watch wildlife by day and stars by night. Explore historic Kettle Falls and Hoist Bay. Check the *Rendezvous* newspaper or park website for a current list of these activities and many more. Reservations are highly recommended for boat tours; visit Recreation.gov.

Boating. Travel park waters by motorboat, kayak, canoe, sailboat, houseboat, or tour boat. Public boat launch ramps are available at park visitor centers, Crane Lake ranger sta-

tion, and the two state forest campgrounds, Ash River and Woodenfrog.

Kabetogama Lake flows east and Rainy Lake flows west. Water flows from Crane Lake through Sand Point and Namanagan lakes to Kettle Falls. Use nautical charts and monitor a weather radio for NOAA broadcasts. Use marine band channel 16 in emergencies.

Camping, Houseboating, and Day Use. The park has over 240 designated boat-in campsites, houseboat sites, and day-use sites scattered throughout. There are no

"drive to" sites in the park. Check at a visitor center for up-to-date information on camping regulations.

Fishing. These waters are world-renowned for walleye, northern pike, smallmouth bass, and other freshwater species. Fishing in park waters requires a Minnesota Department of Natural Resources (MNDNR) license. In Canadian waters you'll need an Ontario license. Contact US Customs for border crossing regulations.

Hiking. The park's 15 trails offer something for everyone—easy, moderate, and strenuous. Some trails or trail sections are mobility accessible. For details check out individual trail maps at a visitor center or visit www.nps.gov/voya.

Winter. From mid-November to late March, snow dominates the landscape. In winter you can drive your car on the lakes' ice roads, which begin at the visitor centers. Winter travel elsewhere in the park is by snowmobile, cross-country skis, or snowshoes. You can rent snowshoes and skis at the Rainy Lake Visitor Center.

MORE INFORMATION

International Border. Always know where you are on the water. Check with Canadian and US Customs before crossing the border. Canadian Customs services are available by water at Portage Bay on Sand Point Lake and by vehicle at the Crane Lake Public Landing and at the International Falls Bridge. For detailed navigation information, scan this code or visit www.nps.gov/voya/plan yourvisitlake-navigation.htm.

Accessibility. We strive to make our facilities, services, and programs accessible to all. For information go to a visitor center, ask a ranger, call, or check our website.

For a Safe Visit. Know and follow all state and federal boating regulations. Boaters must

carry one PFD (personal flotation device) for each passenger. Children under 10 must wear them on board vessels. • Treat lake water by boiling for five minutes before consuming. • Don't depend on cellphones; coverage is spotty in the park. • All food, garbage, and cooking equipment must be kept in a vehicle, vessel, bear-proof locker, or hung 10 feet high and 10 feet out from a pole or tree. • Use only dead and downed wood. To prevent the spread of invasive species, firewood that is brought in must be MNDNR approved. • Federal laws protect all natural and cultural features. Do not damage or collect them. • For a

full list of park regulations, see the *Rendezvous* or visit our website.

Voyageurs National Park is one of over 400 areas in the National Park System. To learn more about national parks and National Park Service programs in America's communities, visit www.nps.gov
